2281	Description with the second se	202
	You are competing in a basketball contest. In this contest the score for each successful shot depends on both the distance from the basket and the player's position. The ball is shot N times, successfully. You are given an array A	,
,05A02.1	containing the distance of a player from basket for N shots. The index of array represents the position of the player. Score is calculated by multiplying the position with the distance from the basket.	. 0
Sk	Your task is to find and return an integer value, representing the maximum possible score you can achieve by choosing	JB1,
<	a contiguous subarray of size K from the given array.	
, 22B12A	Note:	.07
	* A subarray is a contiguous part of array.	2
مر	* Assume 1 based indexing.	
*D5402-	* The array contains both negative and positive values. * Assume the player is standing on a cartesian plane.	281
	Assume the player is standing on a cartesian plane.	V
